

10th Seminar of OHM-Estarreja (2022): reflection for a transdisciplinary dialogue on the Estarreja site

Estarreja, 2nd and 3rd November 2022

As it has been every year, the OHM Estarreja 2022 symposium seeks to carry out the traditional assessment of the scientific production of the OHM Estarreja, considering not only the different fields of expertise of the researchers involved but also the results of funded projects. This year we will also consider the possibility of carrying out a joint reflection between projects with the intention of a more direct contact with institutions and local actors in Estarreja. Several current initiatives such as the several development and remediation work in the Estarreja region and the project for the future industrial museum point to the current moment as being suitable to establish this dialogue between researchers and local actors.

The OHM Estarreja coordination team, together with the "Agorarisk project", and with the support of the Estarreja City Council, proposes an event to create a cross discussion between researchers and the local community. The next restitution symposium aims to allow researchers to get to know the work in more depth and reflect on the possibility of bringing their work closer to the community.

The post-pandemic period also invites us to invest our efforts in face-to-face meetings and a more direct contact with the local community of Estarreja. Thus, the objectives set for this conference are:

- To stimulate a participatory discussion between the different disciplines to allow a reflection on the future paths of the OHM;
- To increase the visibility of the OHM Estarreja observatory;
- To consolidate local partnerships.

The first day will start with a local immersion program for all researchers. The program will include a guided tour of the industrial complex, a guided tour of urban art and a visit to the BioRia nature reserve.

The afternoon will be dedicated to a collective reflection exercise among the participants and will continue with the presentation of the new projects approved in 2022, also in Estarreja.

In the evening, the Estarreja movie theater will present the two entitled "Ria e a Fábrica" e "Vues et Voix d'Estarreja", allowing the population and those interested to meet the authors and the OHM researchers.

The morning program of the second day will be entirely devoted to the presentation of the results reported to the Ongoing OHMI Estarreja 2020 projects presentation. At the end of the morning there will be a synthesis session. Later, the opening of the Agorarisk photo exhibition will take place.
